

## Contents

- 1 roll solar panel mesh (30mts)
- 100 units of J-hook
- 100 units of Speed Washer

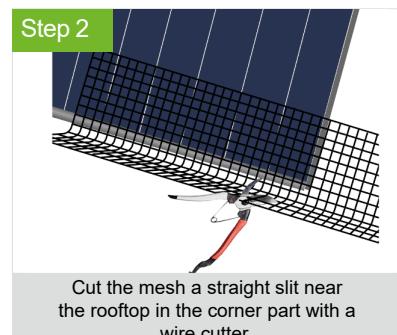

## How to install (when side installation)

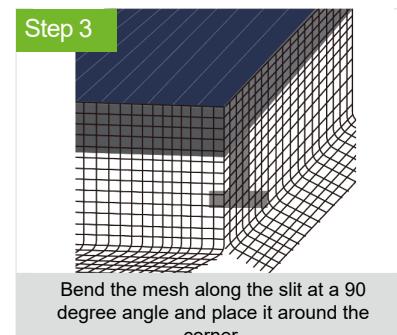

## How to install (when external corner installation)

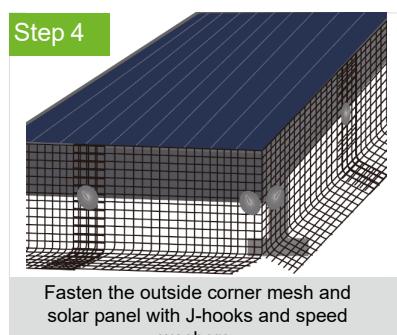

Measure to determine where the bend will go with a tape measure.

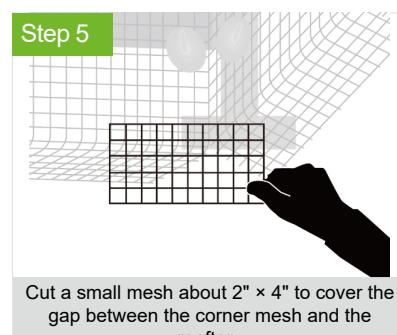

Cut the mesh a straight slit near the rooftop in the corner part with a wire cutter.

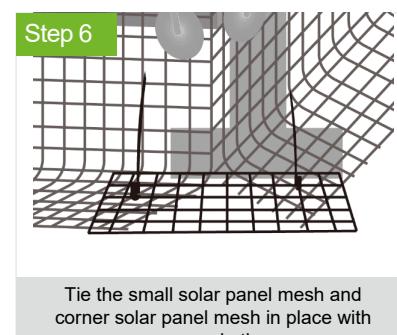

Bend the mesh along the slit at a 90 degree angle and place it around the corner.

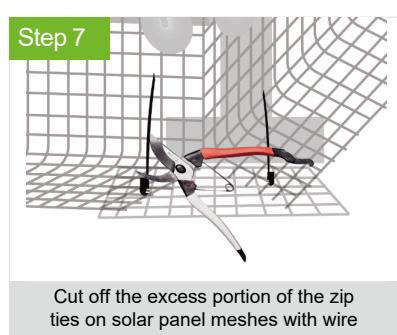

Fasten the outside corner mesh and solar panel with J-hooks and speed washers.

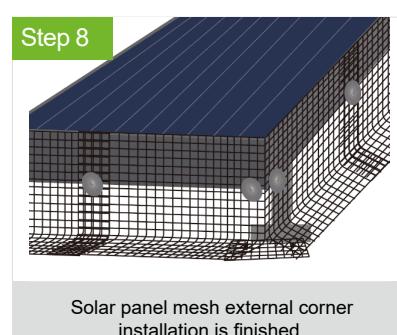

Cut a small mesh about 2" x 4" to cover the gap between the corner mesh and the rooftop.

Tie the small solar panel mesh and corner solar panel mesh in place with corner zip ties.

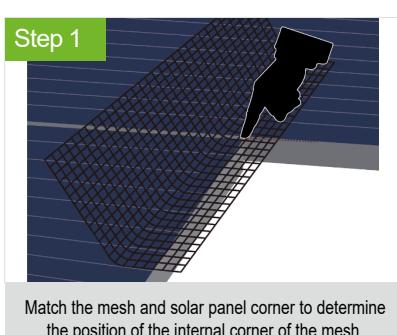

Cut off the excess portion of the zip ties on solar panel meshes with wire cutter.

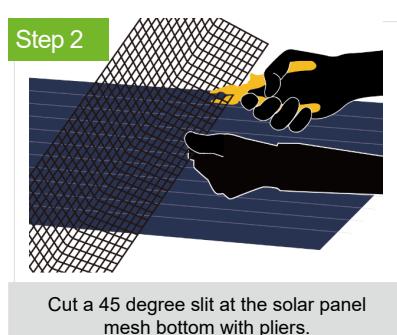

Solar panel mesh external corner installation is finished.

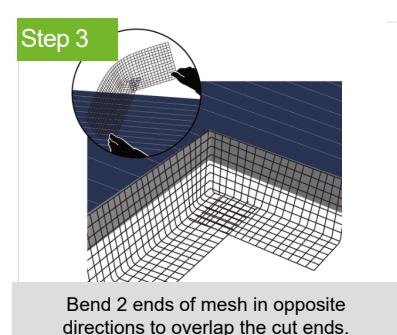

## How to install (when internal corner installation)

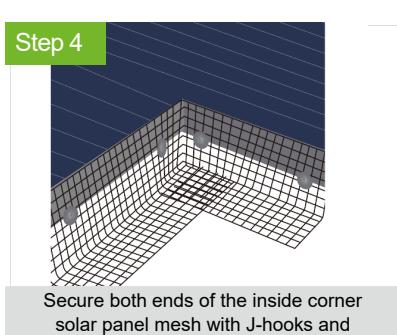

Match the mesh and solar panel corner to determine the position of the internal corner of the mesh.

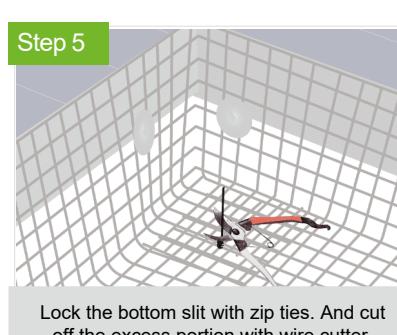

Cut a 45 degree slit at the solar panel mesh bottom with pliers.

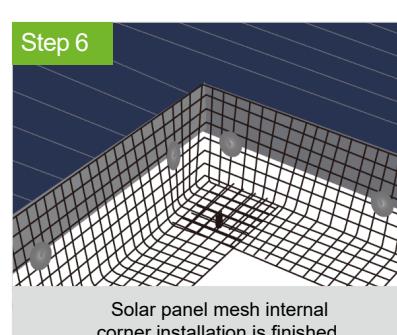

Bend 2 ends of mesh in opposite directions to overlap the cut ends.

Secure both ends of the inside corner solar panel mesh with J-hooks and speed washers.

Lock the bottom slit with zip ties. And cut off the excess portion with wire cutter.

Solar panel mesh internal corner installation is finished.
